

Berlin's charisma and international presence make the capital an exceptional hotspot: this is where promising synergies between young start-ups and established companies emerge. The IoT Hub was created as an innovative space for knowledge transfer and networking, where existing potential in the field of the Internet of Things can be put to best use. The goal of the Digital Hub Initiative is to position Berlin as both an international, central platform for solutions, specialists and innovations, and as the first

port of call for information in the field of IoT. As a technological hub, the hub offers practical, business-related and scientific expertise. This is ensured by its members, who have many years of experience in networking companies and in the development of new business models, and who, under the umbrella of the IoT Hub, encourage important players from the start-up scene, business and science to engage in fruitful collaborations.

Top Programs & Opportunities

1. MotionLab.Berlin Hardtech Innovation Hub & Makerspace

The Motion.Lab Berlin is a partner of the IoT Hub and is available as a Hardtech Innovation Hub and Makerspace with access to an exclusive pool of machines for prototyping and co-working. With its unique infrastructure, MotionLab.Berlin offers young founders an optimal environment for project implementation and corporate development.

2. MakeUp Internet of Things

The program extends over a period of two years and aims to train over 130 students and make them experts in the field of the Internet of Things (IoT). They learn how to develop IoT project ideas and implement them in a short period of time. The core of the project idea is the combination of IoT expertise, software, and programming knowledge and the construction of physical products.

3. IoT Berlin Studie

In 2022, the IoT Hub carried out a study on the topic „IoT in Berlin: Overview and economic potential of the IoT ecosystem in the capital“. The results clearly show how important the IoT industry is for the capital. Not only the exciting start-ups from the scene, but also innovations from medium-sized companies characterize the IoT landscape in Berlin.
